

Bi  
concl-d

flat module. The module may be mechanically locked in a housing (not shown) in particular by way of its cooling plate 8.

**In the Claims:**

Please amend claim 1 to read as follows:

1. (Amended) An intelligent power module comprising a power part of the electronic components of which are arranged on a power substrate, and a logic part of the components of which are arranged on a circuit board having a recess in which said power part is located and electrically connected to the logic part by means of wire bonding techniques, said power substrate being mounted on a cooling plate, wherein a portion of said circuit board is mounted on the cooling plate, the portion surrounding said power substrate.

**REMARKS**

Attached hereto is a marked-up version of the changes made to the specification and claims by the current amendment. The attached page is captioned **"Version With Markings to Show Changes Made."**

The Examiner objected to the drawings for failure to comply with 37 CFR § 1.84(p)(4). Specifically, on page 6 of the specification, the reference numeral "8" was used to designate both the "cooling plate" and the "housing." In addition, the Examiner objected to the drawings under 37 CFR § 1.83(a) for failing to show "recess 110" in Figure 3, as referenced on page 6 of the specification.

The applicant has amended the specification removing the numeral "8" referencing the housing on page 6. In addition, the applicant has also amended Figure 3 by adding reference numeral 110 in order to properly indicate the recess depicted therein. Based upon these amendments the applicant requests that the Examiner withdraw the objections to the drawings discussed above.

The Examiner rejected claim 2 under 35 U.S.C. § 102(b) as being anticipated by U.S. Patent 5,747,875 granted to Oshima. The Examiner asserts the Oshima patent discloses a device having a power substrate comprised of electronic components designated in Figures 1 and 7-11 as 221, 222, and T1-T4. The Examiner further asserts that the device disclosed in Oshima further includes an arrangement of the logic part of the
